

Gracilis Canadian Hemlock

Tsuga canadensis 'Gracilis'

Height: 3 feet

Spread: 5 feet

Sunlight: ○ ● ●

Hardiness Zone: 4a

Other Names: Canadian Hemlock, Eastern Hemlock

Description:

A choice evergreen garden shrub with fine textured foliage, forms a compact mounded shape; excellent for garden detail use or foundation plantings; needs organic, acidic soil, adequate moisture and shelter from drying winds

Ornamental Features

Gracilis Canadian Hemlock is a dwarf conifer which is primarily valued in the garden for its ornamental globe-shaped form. It has dark green evergreen foliage which emerges light green in spring. The needles remain dark green throughout the winter.

Landscape Attributes

Gracilis Canadian Hemlock is a dense multi-stemmed evergreen shrub with a more or less rounded form. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Gracilis Canadian Hemlock is recommended for the following landscape applications;

Planting & Growing

Gracilis Canadian Hemlock will grow to be about 3 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub performs well in both full sun and full shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type, but has a definite preference for acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
