

Birch Hybrid Campanula *Campanula 'Birch Hybrid'*

Height: 6 inches

Spread: 20 inches

Sunlight: ☉ ●

Hardiness Zone: 4a

Other Names: Birch Hybrid Bellflower

Description:

A strong grower with a low, spreading growth habit and impressive floral display.

Ornamental Features

Birch Hybrid Campanula has masses of beautiful violet bell-shaped flowers with blue overtones at the ends of the stems from late spring to late summer, which are most effective when planted in groupings. Its round leaves remain green in color throughout the season.

Landscape Attributes

Birch Hybrid Campanula is an herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Birch Hybrid Campanula is recommended for the following landscape applications;

Planting & Growing

Birch Hybrid Campanula will grow to be only 6 inches tall at maturity, with a spread of 20 inches. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Birch Hybrid Campanula is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
